Customer Reviews

"It is recommended for academic and large public libraries as well as interested special collections."
- ARBA "Highly recommended." - Choice "Those who read this encyclopedia will be left in no doubt that its subject matter, though technical in nature, has an importance which goes far beyond its more obviously military aspects, for as the author rightly points out, banks and stock markets, and thus the world economy itself, could be crippled by interference with satellites. It would therefore be

a useful addition, not only to libraries with military or technical interests, but also to those concerned with international affairs in general." - Reference Reviews"Asst. Prof. Bert Chapman, a government information librarian at Purdue University, deserves commendation for authoring this impressive work, which fills a gap in space-warfare scholarship. This significant and comprehensive treatise provides layman and expert alike a voluminous amount of data, both historical and contemporary, on space weapons and their development. | The book will serve as a valuable primary resource for researchers, space enthusiasts, policy makers, employees of space agencies, officers either currently on staff with space commands or NASA or awaiting assignment, and individuals seeking information about the relationship of space to national security." - Air & Space Power Journal

Bert Chapman is government information and political science librarian and associate professor of library science at Purdue University, West Lafayette, IN.
