## Customer Reviews

Finally a fourth edition after one year delay. It is actually 463 pages, not the 288 as described. Third edition had 270 pages. Very comprehensive. Almost every section has been expanded. 23 total sections. Very useful four pages of pediatric dosing tables of common drugs to mL per age / weight groups. I kept my dog eared 3rd edition to my side, despite having multiple PDA apps on my phone. It is so much easier to thumb through the pages and glance down for quick facts. For more detailed info, I then go to my 5mcc and UpToDate phone apps. I kept copies on desk and gave away to students who rotate through.

I wish I had paid attention to one of the other reviews. The print is so small in this book, I can barely

read it with a magnifying glass! The book is teeny and would fit in a breast pocket of a lab coat, but I would rather pay extra for a book with larger print which fits in a hip pocket. I am sure the content is excellent - Tarascon does produce some very useful books, however PLEASE consider making these books a little bigger!! gave the book 3 stars because I am sure it is great, BUT the size of the book and print makes it unusable for a lot of people over 40...I just bought this book, but I am going to sell it back to ...

Several index page numbers are wrong; otherwise it's a convenient, quick reference.

Excellent tool for clinicals

good book

Very good reference to use when providing care for patients. I am able to keep it in my pocket which is a plus!

This is a good book, unfortunately the font is too small to use. What a shame.

My best reference for years. My books mysteriously disappear at work so I bought a previous edition to save costs. For most things, I prefer this edition.
