## Customer Reviews

This book is 2006 but is still good book as an addition o your knowledge in USMLE especially regarding immunity and coagulation syst em which does not change regarding the basics of the process.It ships fast.5 starts for the seller and lovely

good

i enjoy how it is organized, quick review of very important high yield facts, thank you for putting this up

This book was straight forward and a quick read. It is great for brushing up on immunology in one day.

Excellent...easy to understand...material is very well laid out...I highly recommend it to any med student or biology major in college.

I am using this book in addition to the classes I am taking for a second year medical student. The self tests in this book help you to prepare for the Medical Exam.

Perfect review book for the USMLE step 1. It is quick yet thorough. I found it was a great supplement to what was in First Aid and had all of the pertinent information. I didn't see any topics on the boards that weren't covered in the book.

I bought this book from Amazon because I found it pretty cheap. Mainly, I have been using my Kaplan books for Step 1 (Kaplan's Immunology is superb), but it wasn't too much of an economic risk to grab High Yield to see how it compares in Immunology. High Yield Immunology is just under 100 pages, so it can really be finished in a few sittings. The trick with using this book is to have an idea beforehand of the types of Immunology questions which show up on Step 1. Some of the explanations in this book are crazy and reach "Star Trek Nerd" territory; therefore, when you stumble upon a section which starts to sound like a different language, skim over (or even skip over) it, and you will eventually find your way back among testable knowledge. If you are using Kaplan, there is no need for supplementation, but if you are not using the Kaplan books, High Yield Immunology does the job well. My advice: High Yield Immunology is a great resource, and it's not very expensive. 1.) Read chapters 1-7 and try to make as many connections as possible without dwelling on anything which is confusing. 2.) SKIP CHAPTER 8. 3.) Read chapters 9-15, keeping in mind that this information is highly testable. 4.) After you take your test, read chapter 8, and try to keep yourself from having a laugh attack. This should cover it for Step 1 Immunology.
