Darwinism Under The Microscope: How Recent Scientific Evidence Points To Divine Design

Synopsis

Did you know...The claim that "science and faith are enemies" is a myth? The discovery of DNA and its genetic code points squarely to a designer of the universe? The fossil record is a gigantic embarrassment and "headache" for evolution? Darwin's theories are based ultimately on philosophy, not on science? Brace yourself for a scientific earthquake! Strange "tremors" are now coming from science labs. As researchers uncover new levels of astonishing complexity within the cell, they suddenly face a shocking conclusion: Darwin was wrong. This sophisticated complexity could not arise by change; it must have been designed. *Darwinism Under the Microscope* probes the exciting "Darwinism vs. Design" debate that is making headlines. It lays a scientific foundation for "divine design" and equips the reader to discuss the topic intelligently...even with professors! One of the book's contributing authors, biologist Michael Behe, has done revolutionary work on the cell's tiny molecular machines. His "evidence of design" in *Darwin's Black Box* triggered an ever-expanding global controversy. Using Darwin's own pass-fail test, Behe concludes: "Darwin's theory has absolutely broken down." *Darwinism Under the Microscope* explains the "breakdown" and provides the knowledge and skill to share this breaking news with the next generation. James P. Gills, M.D. has earned a reputation as the most experienced cataract surgeon in the world. He is the founder and medical director of the renowned St. Luke's Cataract & Laser Institute in Tarpon Springs, Florida. Dr. Gills has dedicated his life to restoring much more than physical vision. His not-for-profit publishing outreach, Love Press, has distributed well over three million

copies of his books on a donation basis through LoveLines: The Honor Innovation.

Very intriguing book that makes you ask questions.

This book is a collection of essays compiled and commentated on by Dr. James P Gills and Dr. Thomas Woodward, designed to refute modern science's pervasive allegiance to macro evolution. Each essay is very thorough and most are quite technical. A scientific background is helpful with some of the chapters, especially the Complexity of the Cell and the Design of the Vertebrate Retina (although both establish the entire point of the authors without any other argument necessary.) Chapter 5 offers an excellent synopsis of the most relevant evaluations in this ongoing debate. It provides all the major points of the empirical and philosophical critiques of Darwinism in seed form. If you're looking for just the broad overview, this is your chapter! Chapters 6 and 7 proved to be my personal favorites. Chapter six details the Cambrian Explosion and the Rediscovery of the Burgess Shale both as significant obstacles to current macro evolutionary theory. In Chapter seven, Thomas Woodward puts Dr. Michael Behe's book, Darwin's Black Box: The Biochemical Challenge to Evolution, up against Darwin's own words in The Origin of Species. Darwin said, "If it could be demonstrated that any complex organ existed which could not possibly have been formed by numerous, successive, slight modifications, my theory would absolutely break down." The discovery of molecular biology brought the concept of irreducible complexity to the forefront of the evolutionary debate. Woodward summarizes Behe's position as, "modern evolutionary theory, applying Darwin's own test, flunks spectacularly at the molecular level." The book's conclusion brings all of the essays and all of the technical scientific data to one spectacular point: "Science in its search for truth has sought independence from dogma, ostensibly religious doctrine, and yet scientists have clung pertinaciously to another doctrine that is so silken and seductive, so integral and unquestioned as to be as much the organizing principle of an entire discipline as an explanatory device of individual instances." The author's point? Evolutionary science has become its own religion and it's like the Emperor's New Clothes. Can the immovable position of today's scientific community "be interpreted as anything but hesitance to open the eyes and face the deeper truth that obviously shines through the breaks and faults of a thin and fractured surface?" But all is not lost. "As the masses tremble before their god of science and its liturgies of statistics [and] society slumps into alienation," James Gills reminds us of the Truth and opens the door for grace; the intelligence we were gifted with to behold the beauty of the Designer's plan. "If we deign to look, we will see God's eye in the sun, His gesture in the bee's waggle dance, and His arms in the ocean's fragrant embrace."

The author presents an excellent argument which should result in a thoughtful reanalysis of the theory. That will never happen since the pro-Darwin camp will never acknowledge the possibility of a creator; however, this book is valuable reading for anyone open to a very serious critique of many aspects of the theory.

Liked it. gives proof that everything has to be designed by an intelligent Person.

Did you know that:--Evolutionists shirk their responsibility for explaining how it all started (19, 82-83,120)?--there is a lack of fossil evidence (20, 24, 85, 96-97, 116)?--that Evolution is never seen today (18)?--that Newton and Pasteur were Creationists, so we should be Creationists too (21, 64)?--that the Cambrian explosion causes a problem for Evolutionists (25, 96)?--that Kettlewell's study of moths does not prove macroevolution (11, 83)?--that dog breeders have been operating for hundreds of years, and all they ever get is more dogs (91)?--that Haeckel was a mean ugly man for publishing those distorted embryo drawings (13)?--that Evolutionists have never come up with an explanation for eye development which the Creationists will listen to (41, 51)?--that mutations are always harmful (55)?--that Evolutionists don't mention God in their writings, which means that they don't believe in God (86, 120)?--that "punctuated equilibrium" is nothing more than an apology for poverty of transitional fossils (104)?If you've already heard all this, then you've already read the first half of the book.No, wait--there is one new twist which I haven't seen before: Chapter 4, written by a guest writer, gives a description of DNA molecules. You are supposed to gasp in amazement at the wonder and complexity of the DNA molecule, and declare that nothing short of an all-wise and all-powerful designer could ever create such a thing.You are also supposed to forget that DNA is described in every freshman biology textbook, and is surely familiar to every biologist, no matter what his persuasion. It is also hoped that you don't know that Evolutionary researchers have hopped on DNA research from the very beginning, only to find that it confirms what they had been suspecting all along.The second half of the book deals with Michael Behe and his famous mousetrap. That part is too technical for me, so I stopped there.
