# Reef Fish Identification Tropical Pacific 2nd Edition

## Synopsis

The book features more than 200 additional species, hundreds of improved photos, scientific name changes and range extensions. The popular field guide contains the most current and comprehensive information available for divers, naturalists and aquarists chronicling marine fishes ranging from Thailand to Tahiti. The new edition includes 2,000 species with 2,500 photographs of fishes in their natural habitat. The user-friendly guide groups species in 20 color-coded identification groups based on similar physical or behavioral characteristics. Multiple photographs for many species show variations in color and markings, life cycle phases and gender. Accompanying species accounts include common and scientific names, family, size, visual descriptions, geographical ranges and distinctive characteristics, making the visual identification of a particular species easier than ever before.

## Book Information

Paperback: 502 pages

Publisher: New World Publications; 2 edition (October 30, 2015)

Language: English

ISBN-10: 1878348604

ISBN-13: 978-1878348609

Product Dimensions: 6.3 x 1.3 x 9.2 inches

## Customer Reviews

The four author/photographers are among the best in the business. Dr. Gerald Allen, from Perth Australia, has authored more than 30 books and 300 scientific articles. The retired Senior Curator of Fishes worked at the Western Australian Museum for 25 years. Dr. Allen's authoritative expertise is augmented with images from three of the best-known underwater photographers in the world. Roger Steene, a lifelong resident of Cairns, Australian and the author of many of the most beautiful undersea books ever published, has been on the cutting edge of marine photography for 50 years. Paul Humann and Ned DeLoach, owners of New World Publications and founders of REEF (Reef Environmental Education Foundation), have photographed, authored and published more than a

dozen field guides for marine life around the world.

I have a number of Paul Humann Reef Fish identification books. They are very detailed and provide help on fish identification. Although there is extensive information, don't expect every fish to be represented. Also, many fish are very similar or differ from juvenile to adult. You also need to pay attention to the range for the fish in the pictures. You may think you have just found a rare fish when in fact, it does not inhabit the area where you are. All the details of how to use the book are in there so take time to see how to best use this excellent reference. I recently used this book for my dives on the Great Barrier reef and Coral Sea.

I already had bought the first edition and bought this second edition to update myself. It is a LOT of information. I recommend it 100%

Great book, well organized with multiple indexes. All dive boats have this - it is indispensable.

The more guide books the better!

Was a b-day pres for my husband. He loved it! said the pix are just amazing! really well done.

Beautiful book, the best I know if you plan on diving or snorkeling the Pacific. Aboard our ship in Raja Ampat they had this guide as well.

Great photos showing several phases so you can be more accurate in your identification. Great to have along on our recent trip to French Polynesia.

A very good organized book, useful for identification.
