Amazing and carefully presented scientific/spiritual universal view. It tactfully encompasses that one is not isolated from the other but that they exist unified.

The consistency of footnoting the authors material really impressed me. The author very clearly elucidated the anomalous phenomenon that crop up throughout the hard sciences.

Our "Forum on Faith and Science" has started to review "Science and the Reenchantment of the Cosmos" by the same author. I bought this earlier book to get a better idea of the evolution of the basic concept of the Akashic Field. I got what I wanted. It is quite clearly written, for a book on something that most of us would be discovering for the first time. I am sharing it around with several of my friends because I also think that it should be better known. Our whole society needs to understand that we are so basically connected. Two thumbs up! I am also suggesting that they get some of the later books if they like this one.

Fits perfectly in my way of thinking. Excellent research and clear explanations, easy for everyone to understand.

It came in the condition as described which isn't pretty but that's just the cover. I am really enjoying this book and it's worth the money. It's cerebral and I like that.

I am currently taking a course on-line with Ervin Laszlo and find this book a great adjunct to the series. He writes about profound things in a very readable way and the breadth of his thinking is inspiring. This is a person who has devoted his life to pursuing the search for truth, in all its guises and his work, together with many others on the same path, with quantum physics and spirituality, is now bearing great fruit

Although Mr. Laszlo develops his key idea of an "in-formed" Universe with reports from the unresolved conundrums of physics which allow the quanta to be used through what, to a lay person, appears to be... place holders... in the equations... and working forward quickly to more recent experimental results in many intellectual 'fields'... the implicit edifice... is a description of our Universe with beyond light speed, enfoldings... in a creative essence. For those who have concluded as I had that the Universe speaks through cognitive Beings' mouths and feels itself through our hearts in a thrilling cosmic feedback loop... Especially if you are a scientist feeling that functional outcomes without some kind of totality of infinite mystery is a desiccated, even tired reactionary dead end... for the poetic soul who is alienated from science... for couples wondering at their attractions and the meaning of love and for the lover of intelligence and wonder and optimism... and for the religious and spiritual too (with the caveat below), buy and I suspect share this very important even, beautiful book. Small with no equations... written briskly and with largely simple prose, proving that profundity is reliably identified by its simplicity of description when that expression... draws near to a core truth. But of course the "in-formed" review field must include some negative to be really creative: the word God apparently is anathema to Mr. Laszlo... he cuts any mention of the idea by saying that any form of divinity is not needed to explain the Universe as we experience it or its God like... nature. This I found to be shallow... information is not the state of an electrical/chemical structure of the brain or a memory chip etc. nor is it the "A Field," that is his "Akashic Field," or the Knowing Field... Laszlo wants to create a new physical description of why coherence is experimentally seen in divergent fields that transcends physical connection as currently described

by normative science thought schemes. This I applaud... but why he is allergic to the word "God" to the point at least of exploring to a small degree... the obvious similarities in religions... to his ideas... is more interesting. Read his description of his own intellectual journey at the end of the book. It is interesting but one quickly understands the absence of the "G" word or reference to it except tangentially in New Age speak here and there: he is a UN, UNESCO, Club of Rome kind of "systems analyst" and WE are the system. Throw in "sabbaticals" to his "farmhouse in Tuscany," etc. etc. .I still highly recommend the book but be aware that there may be a world control agenda "system" that has cooped Mr. Laszlo without his knowledge or with it... . How a man can come to the conclusions of this book and still spend months writing for the U.N. ... as a proffered mechanism for the implementation of his ideas one must assume... is chilling and a mystery. Given his background written in some detail at the back of the book...one can only say there must be more to Mr. Laszlo politically than this book reveals... or he is still naive in the extreme but that is hard to believe. The Beast funds anything that tears down ultimately... individuality responsibility/freedom/creativity... NOT that I am accusing the author of that only that a forced... "Akashic Field" is a ridiculous concept and anathema, to what he centrally describes here which is worthy and insightful. But it must be said and should be said more often that the dark Force that is behind the timed collapse of economies and a symphony of wars to produce a world government outcome... uses every tool in the intellectual box for its ends.

Irvin Laszlo's "Science and the Akashic Field" discusses his theory that there is more to reality than the physical realm of modern science. His central point is this: "we need to recognize the presence of a factor that is neither matter nor energy. The importance of this factor is now acknowledged not only in the human and social sciences, but also in the physical and life sciences. It is information - information as a real and effective factor setting the parameters of the universe at its birth, and thereafter governing the evolution of its basic elements into complex systems ... It is the presence of in-formation throughout the cosmos, carried and conveyed by the universal in-formation field we have named the Akashic field." Laszlo credits David Bohm with some of the insights underlying his (Laszlo's) theory: "other physicists, among them David Bohm, refused to accept the quantum physical concept as a full description of reality. His "hidden variables theory" suggests that the selection of the state of the quantum is not random; it is guided by an underlying physical process. In Bohm's theory a pilot wave, identified as the quantum potential "Q", emerges from a deeper, unobservable domain of the universe and guides the observed behavior of particles. Thus, particle behavior is indeterministic only at the surface; at the deeper level it is determined by the quantum

potential. Later Bohm called the deeper level of reality the "implicate order", a holofield where all the states of the quantum are permanently coded. Observed reality is the "explicate order
