Michele Payn is an author and a media resource who speaks from the intersection of farm and food to bring clarity and common sense to the grocery store.

From the food myths that are debunked, marketing and labeling myths that we buy into - to the personal stories of those who are growing our food: this book gave me new insights into the enormous process that it takes to grow food for the world. To buy a package of chicken labeled "hormone free" is like buying bottled water labeled "gluten-free". Shame on us for buying into the half-truths that are splashed across the food packages. Get a glass of milk and enjoy. **Food Truths from Farm to Table: 25 Surprising Ways to Shop & Eat without Guilt**

I just finished reading this book via the Kindle App on my phone ... it covers an amazing amount of information in about a 4-hour read! As a Registered Dietitian Nutritionist, I found the food and nutrition information accurate and well-documented by science-based sources. It was originally

recommended to me by one of my friends who is trained in agriculture and who felt it gave a very balanced and accurate view of his discipline also. It doesn't take sides, but presents the facts in an interesting way and down-to-earth way. The author reminds readers how the best choice may vary according to a person's situation and preference ...no food shaming! What I liked most was how the author gently debunked various food myths ... for example, chickens that lay eggs prefer being in a climate-controlled, pest-controlled cage that provided sufficient room, rather than being cage-free. The reader may be surprised to learn the carbon footprint of various methods of food production and which methods actually have the lowest carbon footprint.

What a great book, and so timely. In a world where everything in the grocery is labeled for what it's NOT, Michele helps us understand what is important, how our food is produced, and how to shop/eat without guilt. This book helped to put my mind at ease about what I purchase and feed my family.

Could not put this book down and have never written a review before. But this book is so informative. If you have ever questioned how to eat and what to eat - organic, natural, paleo, dairy, meat, please please buy this book. I am a farmer and I learned so much. I feel like I can defend what I do so much better with the knowledge I now have. We get so much information from sources other than the farmer that grows your food like Dr. Oz and Food Babe that only give you snippets and not the whole story This gives you the whole story and more. The USA has the safest food supply and we need to keep it that way. Science is helping to feed the world not destroy it.

Finally, a book that helps us, as consumers, know and understand how our food is produced and how we shouldn't feel guilty about the choices that we make for our family in the grocery store or farmer's market. This book is easy to read and understand without being too scientific so the common soccer mom, like me can understand! My next grocery store experience will be so much better and I won't give in to the misleading marketing schemes that are out there.

This is a great book for the conscious eater. There are so many fallacies out there about where our food comes from. Michele does a wonderful job easing dispelling those myths. A bit of the writing is repetitive, but she sure drives her message home for the reader.

Excellent read for the consumer and advocate for agriculture. The author does a great job

explaining food myths for a better understanding of how and where our food comes from.

Very factual and educational. I highly recommend this to anyone looking for science based information.
