## Customer Reviews

Mark Geddes is a lifelong tinkerer and gadget enthusiast. Frustrated with the lack of practical, visual guides to help him teach his 10-year-old how to build with Arduino, he set out to record his own experiments, and Arduino Project Handbook is the result. Geddes has a bachelor's degree from Edinburgh College of Art. He lives in Dumfries, Scotland.

Would have been nice to know what subjects were contained in this book

This is a great book if you are looking for a reference that does not make any assumptions about your current knowledge of Arduino. It is extremely clear and easy to read. No special knowledge required to get started. Everything is explained using common everyday language. The attention to detail is helpful.

Clean, clear, easy to follow instructions. I've worked through a few and I already know a bit about Arduino.

Great book. Very complete. The best place to start programming Arduino.

A very good book for the projects.

Well explained. Very good.

Good handbook . Some projects are too simple but I can build 4 or 5 projects I can use.

More of "not the same". A nice quick basic refresher to start, then, pick a project and Do It.
