Family Health Care Nursing: Theory, Practice, And Research, 4th Edition

Synopsis

Significantly updated and thoroughly revised, the 4th Edition approaches family nursing the way it is practiced todayâwith an evidence-based, clinical focus built on a firm foundation of theory and research. From health promotion to end of life, a new organizational structure parallels the trajectory of illness, incorporating caring for the family along this continuum of care in a variety of specialties.

Customer Reviews

good book

I actually have taken quite a few Master's level counseling courses in Human Development and Family Systems and thought that I wouldn't learn anything from this book but I was happy to find out I was quite wrong. This is well written, very well researched and succinct. Additionally, they provide demographic information from Canada and the US, so you can get an idea of US Health Policy effects as compared to Canada's. Overall, a great read.

I got this book as a requirement for my family health nursing class. I hated this book! Seriously, every time I would try to read for my assignments, I would be bored to death. Very dry reading, and it literally put me to sleep at least one time.

This was required for Family Nursing at Ohio University. The book was helpful for my class. I have

purchased books from for my course of RN to BSN.

This is a required textbook for a class. Most of it is barely palpable. Good theory book but outside application in practice will be limited to none unless you are doing research. Watching paint dry was more fun than reading this book.

Great book! Worked well for school and I got it at a great price!

Needed it for school but learned so much I purchased it to continue using it.

This was as described and arrived timely.
