Radiation Defect Engineering (Selected Topics In Electronics And Systems)

Synopsis

The increasing complexity of problems in semiconductor electronics and optoelectronics has exposed the insufficient potential of the technological doping processes currently used. One of the most promising techniques, which this book explores, is radiation doping: the intentional, directional modification of the properties of semiconductors under the action of various types of radiation. The authors consider the basic principles of proton interactions with single crystal semiconductors on the basis of both theory as well as practical results. All types of proton modifications of the materials known presently are analyzed in detail and exciting new fields of research in this direction are discussed.

Book Information

Series: Selected Topics in Electronics and Systems (Book 37)

Hardcover: 253 pages

Publisher: World Scientific Publishing Company (November 21, 2005)

Language: English

ISBN-10: 9812565213

ISBN-13: 978-9812565211

Product Dimensions: 6.8 x 0.9 x 10.1 inches

Shipping Weight: 1.5 pounds (View shipping rates and policies)

Average Customer Review: Be the first to review this item

Best Sellers Rank: #2,873,627 in Books (See Top 100 in Books) #70 in Books > Science & Math > Chemistry > Nuclear Chemistry #485 in Books > Engineering & Transportation > Engineering > Electrical & Electronics > Electronics > Semiconductors #1784 in Books > Science & Math > Physics > Nuclear Physics
