Ron Larson received his Ph.D. in mathematics from the University of Colorado in 1970. At that time he accepted a position with Penn State University, and he currently holds the rank of professor of mathematics at the university. Larson is the lead author of more than two dozen mathematics textbooks that range from sixth grade through calculus levels. Many of his texts, such as the tenth edition of his calculus text, are leaders in their markets. Larson is also one of the pioneers in the use of multimedia and the Internet to enhance the learning of mathematics. He has authored multimedia programs, extending from the elementary school through calculus levels. Larson is a member of several professional groups and is a frequent speaker at national and regional mathematics meetings. Betsy Farber received her Bachelor's degree in mathematics from Penn State University and her Master's degree in mathematics from the College of New Jersey. Since 1976, she has been teaching all levels of mathematics at Bucks County Community College in Newtown,

Pennsylvania, where she currently holds the rank of professor. She is particularly interested in developing new ways to make statistics relevant and interesting to her students and has been teaching statistics in many different modesâ”with the TI-84 Plus, with MINITAB, and by distance learning as well as in the traditional classroom. A member of the American Mathematical Association of Two-Year Colleges (AMATYC), she is an author of The Student Edition of MINITAB and A Guide to MINITAB. She served as consulting editor for Statistics: A First Course and has written computer tutorials for the CD-ROM correlating to the texts in the Street Series in mathematics.

The book was just what I was expecting! The best part? It came with the code needed to access the online class. I literally paid \$16 for the code AND book while the website and school were trying to charge me \$104! I love saving!

Perfect for my college student. We have rented several books and it works out very well.

Book is a bit confusing. Seems to work on the principal that you already know some of the formulas that are discussed.

This has been very helpful even though it's not the same edition as we are using online. I like taking a book with me because I don't always have internet access. It also came with a CD that had not been opened and a full pull out of graphing key formulas on card stock that is in like new condition and not ripped from the book. The examples and explanations are very good with TI 84 examples at the end of some chapters. The appendix has tables and answers (every other one) in the back of the book for chapter tests. I highly recommend.

The \$200 ****new**** book does not come with an access code to the online portion. I've never seen that before, but it puts the ridiculousness of overpriced college supplemental materials at a new level.

I got this textbook because the textbook they offered online for the statistics class I was taking was the same book but 5th edition and MUCH higher in price (\$100+). Even though it has the same typed of questions and lessons. Also the textbooks now that are available to buy are online textbook and you have to flip the pages on the screen. Another reason why I got this textbook was because I

wanted a textbook hands on because it is easier to flip back and forth between pages thus making the lesson easier to understand

Excellent condition

I received the book on time and it was in very good condition as described by the seller. I would use this seller again. The book wasn't marked or highlighted to death and it contained the CD for the book which was a plus. Despite the fact that I hate math and statistics but hopefully this book will help me to understand the language of statistics.
