Finite Mathematics And Calculus With Applications (10th Edition)

Synopsis

Finite Mathematics and Calculus with Applications, Tenth Edition by Lial, Greenwell, and Ritchey, is our most applied text to date, making the math relevant and accessible for students of business, life science, and social sciences. Current applications, many using real data, are incorporated in numerous forms throughout the book, preparing students for success in their professional careers. With this edition, students will find new ways to help them learn the material, such as Warm-Up Exercises and added “help text” within examples.

NOTE: Before purchasing, check with your instructor to ensure you select the correct ISBN. Several versions of Pearson's MyLab & Mastering products exist for each title, and registrations are not transferable. To register for and use Pearson's MyLab & Mastering products, you may also need a Course ID, which your instructor will provide.

Used books, rentals, and purchases made outside of Pearson. If purchasing or renting from companies other than Pearson, the access codes for Pearson's MyLab & Mastering products may not be included, may be incorrect, or may be previously redeemed. Check with the seller before completing your purchase.

Note: You are purchasing a standalone product; MyMathLab does not come packaged with this content. MyMathLab is not a self-paced technology and should only be purchased when required by an instructor. Students, if interested in purchasing this title with MyMathLab, ask your instructor for the correct package ISBN and Course ID. Instructors, contact your Pearson representative for more information.

Customer Reviews

Marge Lial (late) was always interested in math; it was her favorite subject in the first grade!

Marge's intense desire to educate both her students and herself has inspired the writing of numerous best-selling textbooks. Marge, who received bachelor's and master's degrees from California State University at Sacramento, was affiliated with American River College. An avid reader and traveler, her travel experiences often found their way into her books as applications, exercise sets, and feature sets. Her interest in archeology led to trips to various digs and ruin sites, producing some fascinating problems for her textbooks involving such topics as the building of Mayan pyramids and the acoustics of ancient ball courts in the Yucatan. Raymond N.

Greenwell earned a B.A. in Mathematics and Physics from the University of San Diego, and an M.S. in Statistics, an M.S. in Applied Mathematics, and a Ph.D. in Applied Mathematics from Michigan State University, where he earned the graduate student teaching award in 1979. After teaching at Albion College in Michigan for four years, he moved to Hofstra University in 1983, where he currently is Professor of Mathematics. Raymond has published articles on fluid mechanics, mathematical biology, genetic algorithms, combinatorics, statistics, and undergraduate mathematics education. He is a member of MAA, AMS, SIAM, NCTM, and AMATYC. He has served as governor of the Metropolitan New York Section of the MAA, as well as webmaster and liaison coordinator, and he received a distinguished service award from the Section in 2003. He is an outdoor

enthusiast and leads trips in the Sierra Club's Inner City Outings program. Nathan P. Ritchey earned a B.A. in Mathematics with a minor in Music from Mansfield University of Pennsylvania. He earned a M.S. in Applied Mathematics and a Ph.D. in Mathematics from Carnegie Mellon University. He is former chair of the Department of Mathematics and Statistics at Youngstown State University and is currently serving as the dean of the College of Science and Health Professions at Edinboro University. He has published articles in economics, honors education, medicine, mathematics, operations research, and student recruitment. Nate is a Consultant/Evaluator for the North Central Association's Higher Learning Commission and regularly participates in program evaluations. In recognition of his numerous activities, Nate

has received the Distinguished Professor Award for University Service, the Youngstown Vindicator's "People Who Make a Difference Award," the Watson Merit Award for Department Chairs, the Spirit in Education Award from the SunTex corporation, and the Provost's Merit Award for significant contributions to the Honors Program. ã

Excellent book. Content well organized with many practical application problems. I particularly liked loose leaf version because it was less costly and I was able to take a section of the manual out for transport during a trip making for a much lighter load. Note that corresponding solutions manual (sold separately used or new - highly recommend) only shows solutions to odd numbered problems, however, problem types are duplicated so this did not pose an issue. Not sure of updates available in newer edition, but it's pricey. Since the principles/concepts covered in this book really don't change, my class only required the older edition which covered the material nicely.

Book is alright, purchased it because it is required for two math courses I have to take. Overall pleased with the application portion of the text, I feel like in the business aspect of things it makes a little more sense for me. Questions range from easy to difficult as they should. The back of the book contains answers to odd numbered questions, but does not work through the actual problems (which is a plus because it makes you think and analyze your own answer if you get something wrong). My instructor prefers to use the textbook in class and it seems to compliment his teaching style well. Purchased from .com, not an individual seller on .com, so the text came wrapped appropriately and in new condition as advertised.

My professor allowed our class to use this later edition. Honestly, even with this older edition not much was changed other than maybe a few problems being out of order, but still the same problems ã from the newer edition. Once I told everyone it only cost me 0.16c + shipping and handling, they were all floored. This book was a great buy and I even got a MyMathLab Code with it! Great deal!

i was hesitant because it was only \$13, but being the broke college student that i am, I went ahead a bought it. Shipped fast and I got the text book i needed while saved \$100+!

Very well written and organized text book that is a great way to summarize the mathematics required for predictive analytics. When coupled with MyMathLab (the new book comes with a code

that provides access to the online instruction - which can be purchased separately if you buy a used book), and the solutions book, you will have a great learning/review aid for data sciences.

Great content for a math text that offers a survey of topics. If I bought this book again I'd buy a new copy though because the spiral binding on the used copy I purchased is coming apart and I have to be really careful with it whenever I use it.

The book came on time and I was able to purchase at a great price.

This is a terrible textbook. It doesn't explain anything! If you don't already know the material, you're screwed. Good for practice but not for learning.
